<u>Overview</u>

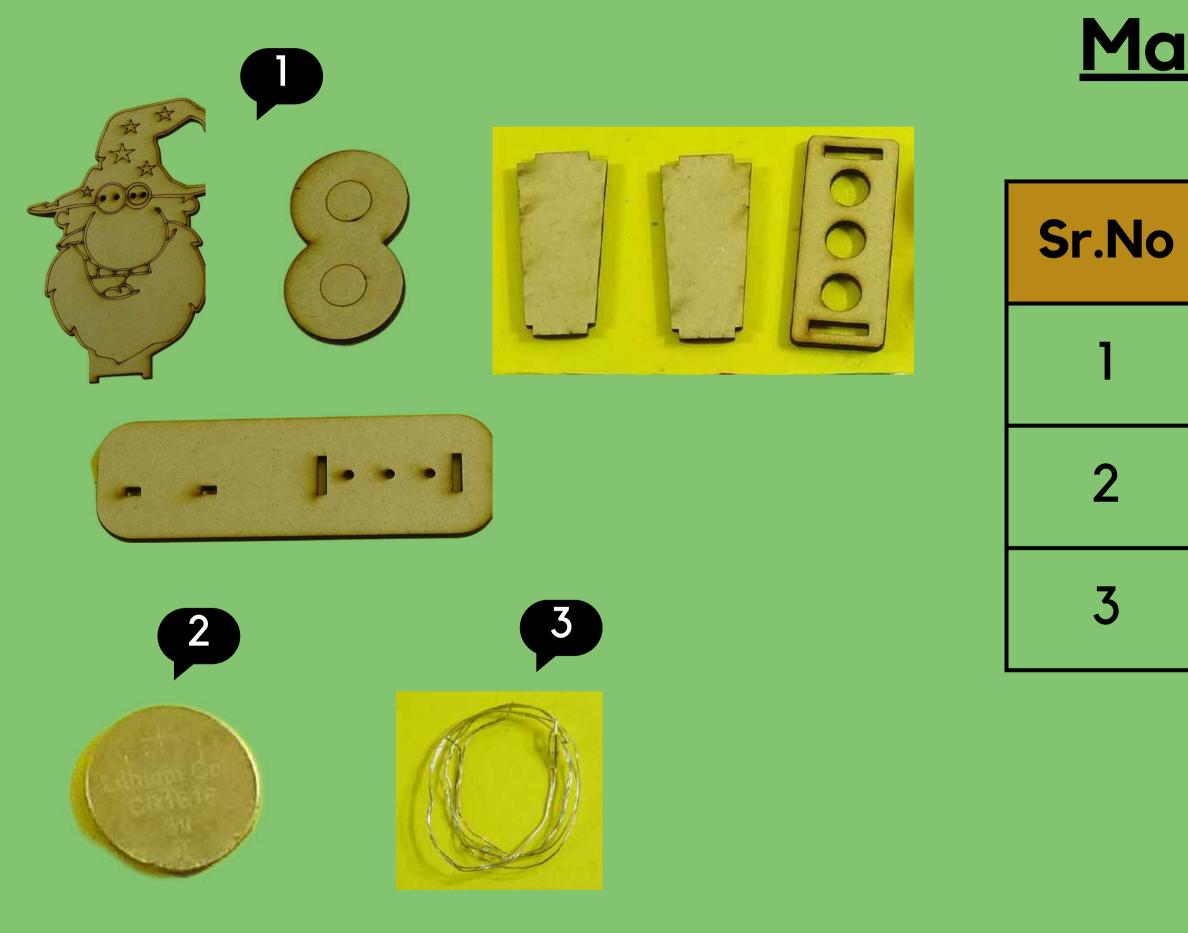

Step into the world of LEDs with the LED Wizard Experiment! Learn how to light up LEDs using simple circuits. Explore colors and patterns in this hands-on adventure. Discover the magic of electronics!"

Engineering challenge

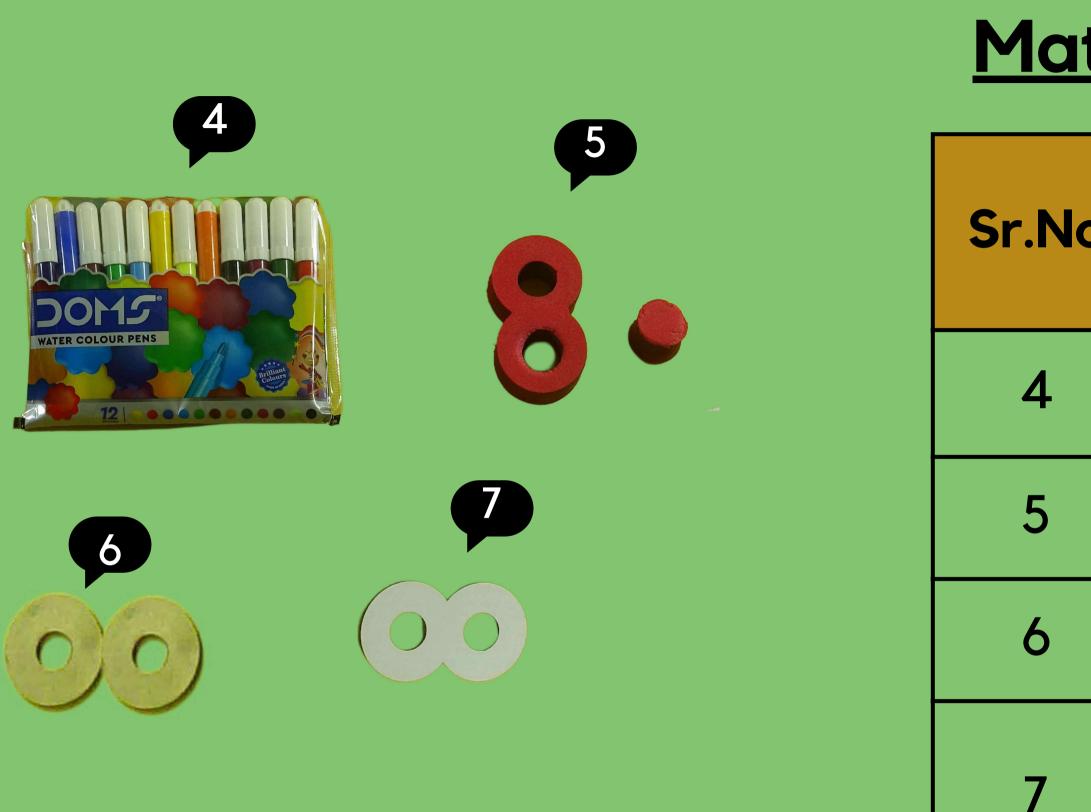

Design a Dazzling LED Display! Use circuits to create patterns and colors with LEDs. Experiment with connections to craft your unique light show. Unleash your creativity in this illuminating engineering adventure!

<u>Materials Required</u>

Name	Qty
MDF Parts	1
Cell	1
LED	1

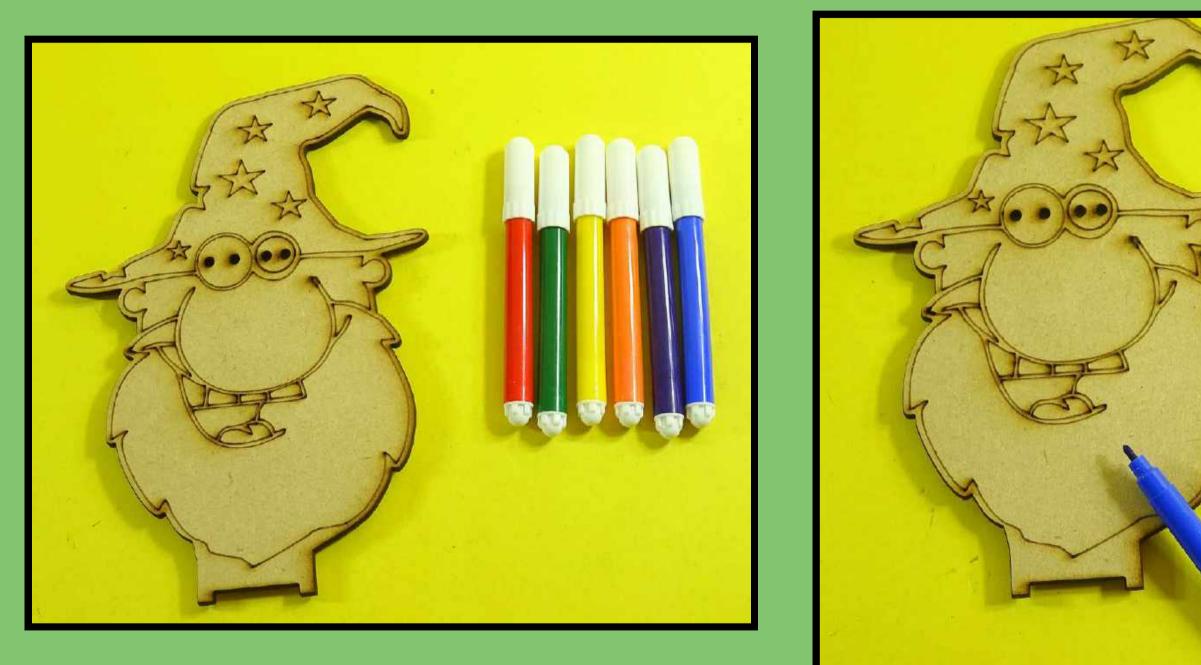

<u>Materials Required</u>

0	Name	Qty
	Color Pens	1
	Cell Holder Foam	1
	Washer	1
	Double side sticker	1

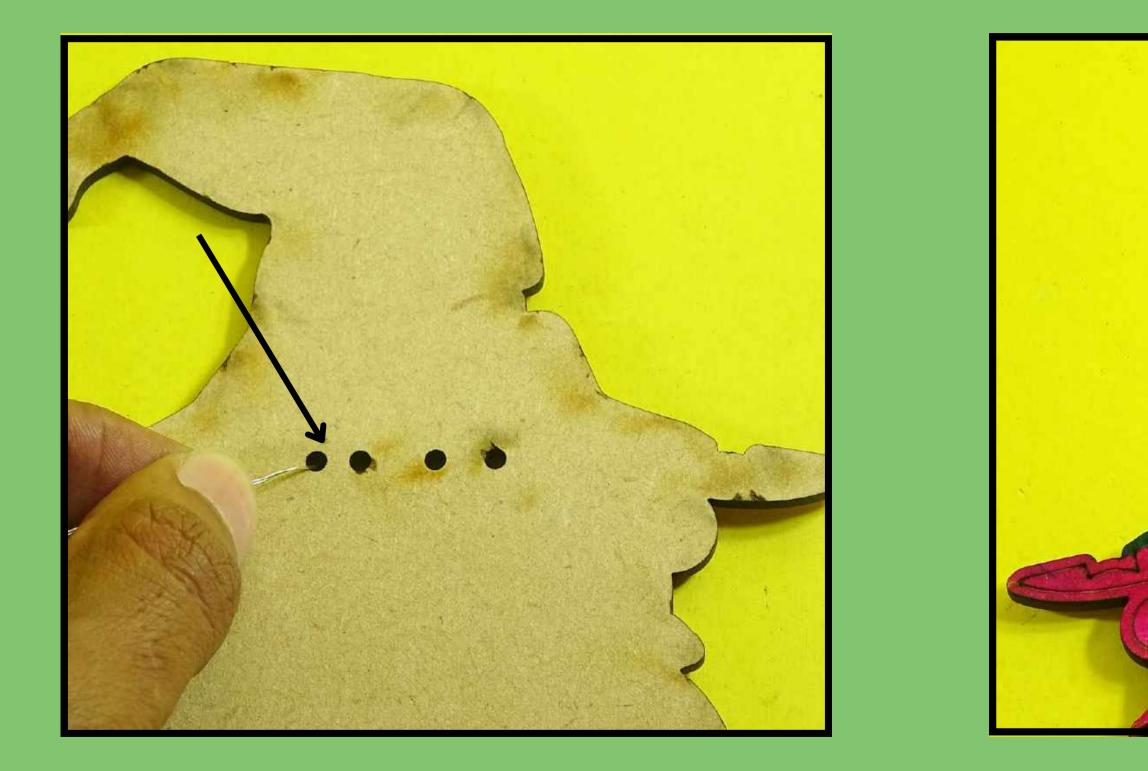

Color the face-shaped MDF using the sketch pens of your choice

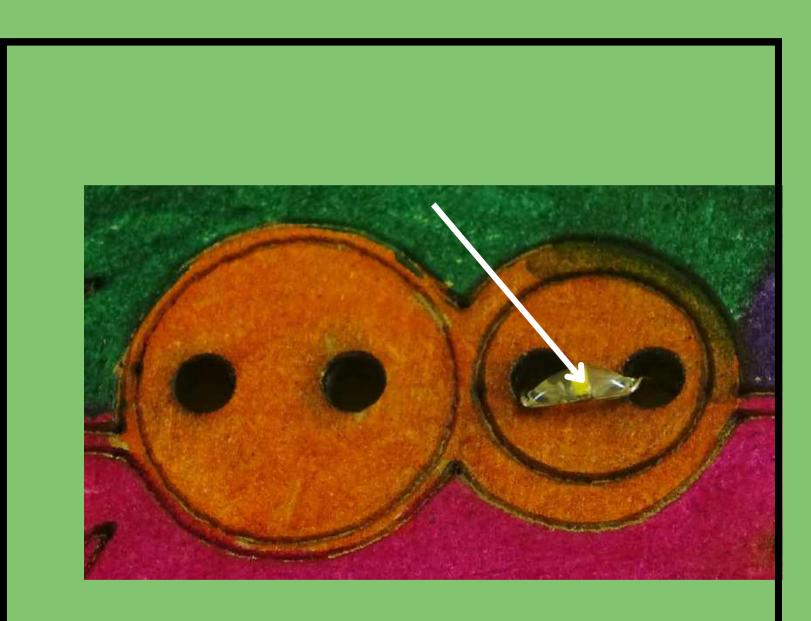

carefully put the LED wire through the hole as demonstrated.

Place the LED wire into the nearby hole marked by an arrow, then gently pull extra wire through and secure the one LED to the front face of the **MDF** as demonstrated

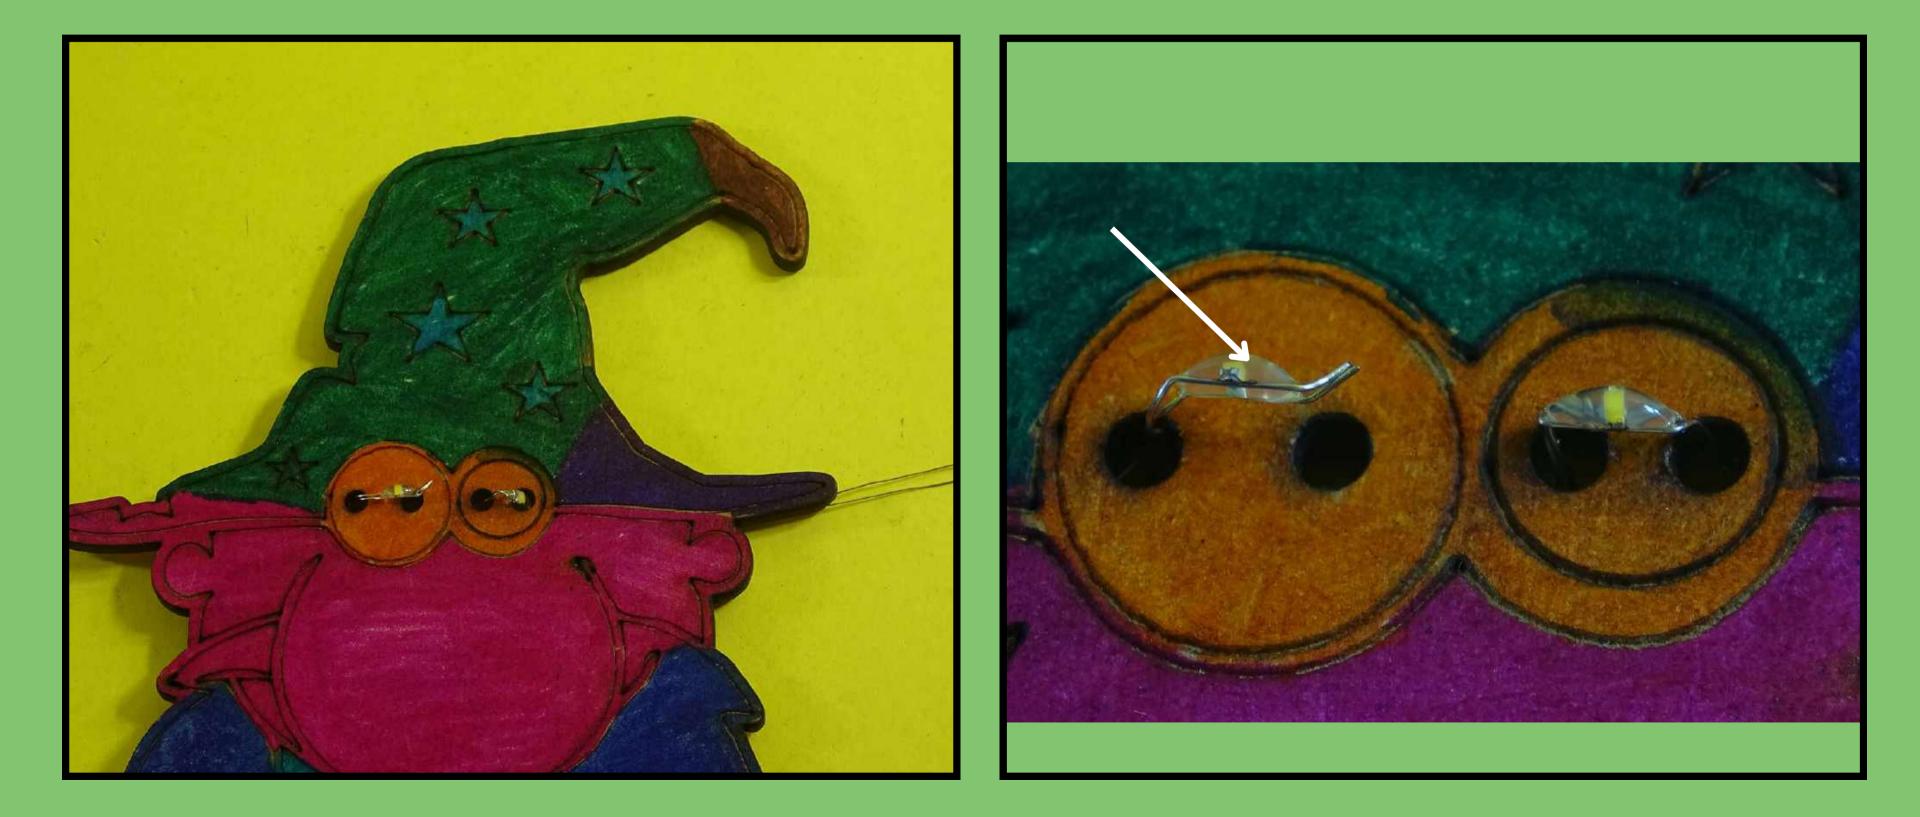

Put the LED wire into the hole in the MDF pointed out by the arrow, just like it's shown

Fasten the second LED onto the front face of the MDF as demonstrated

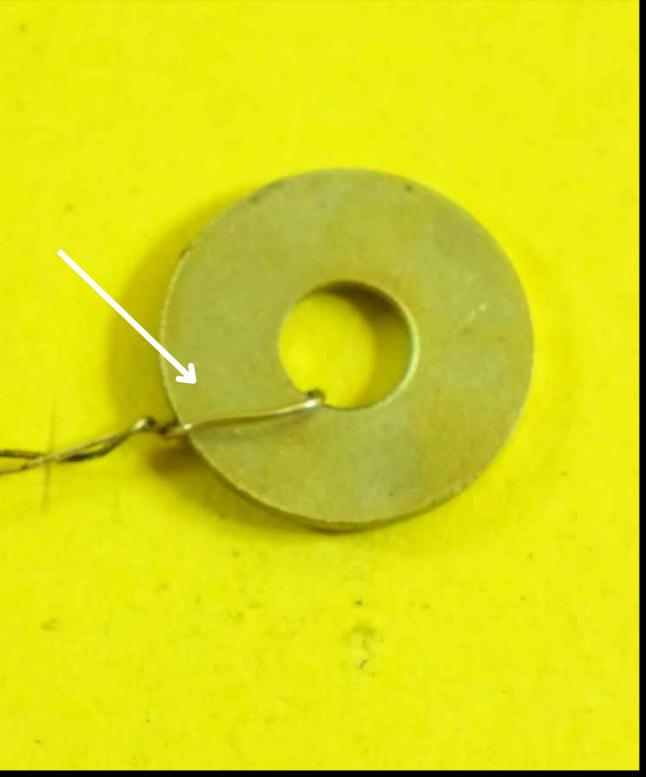

This is how your MDF looks from the front and rear views after connecting the LED to it

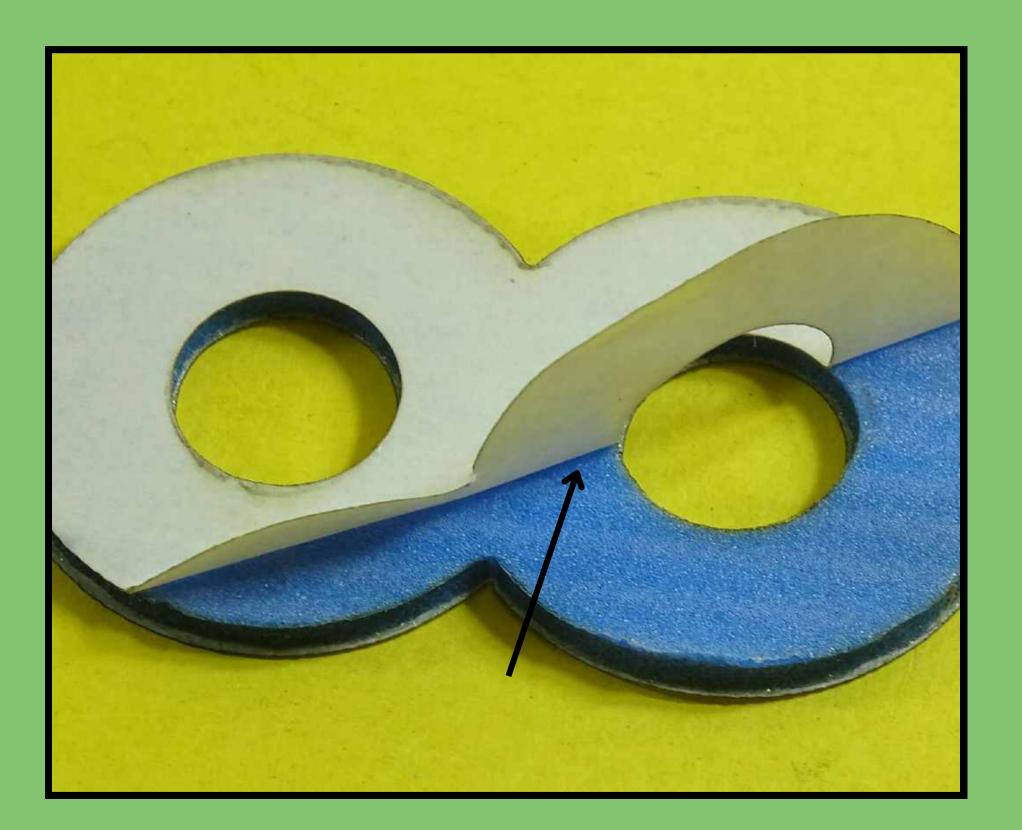

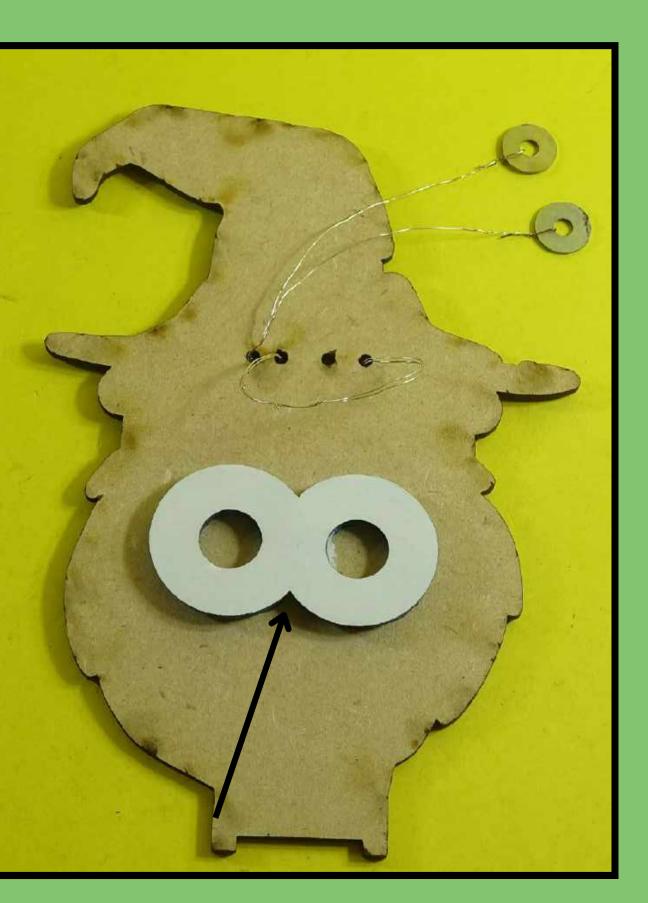

Attach the washer to the LED wires just like as shown.

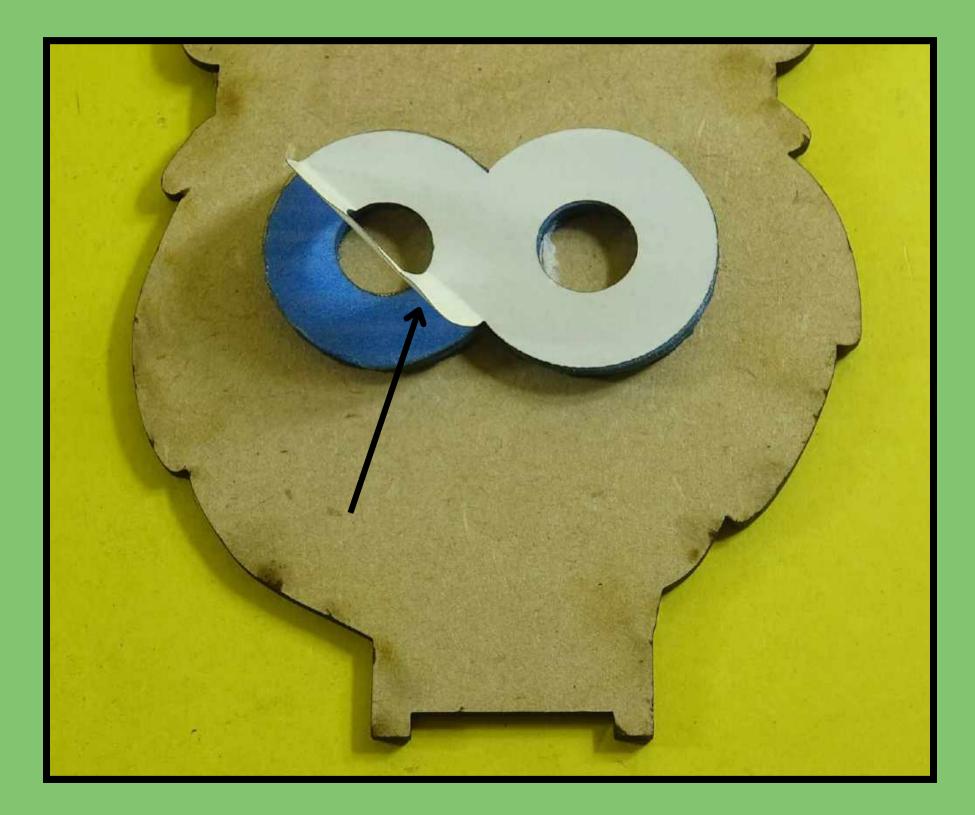

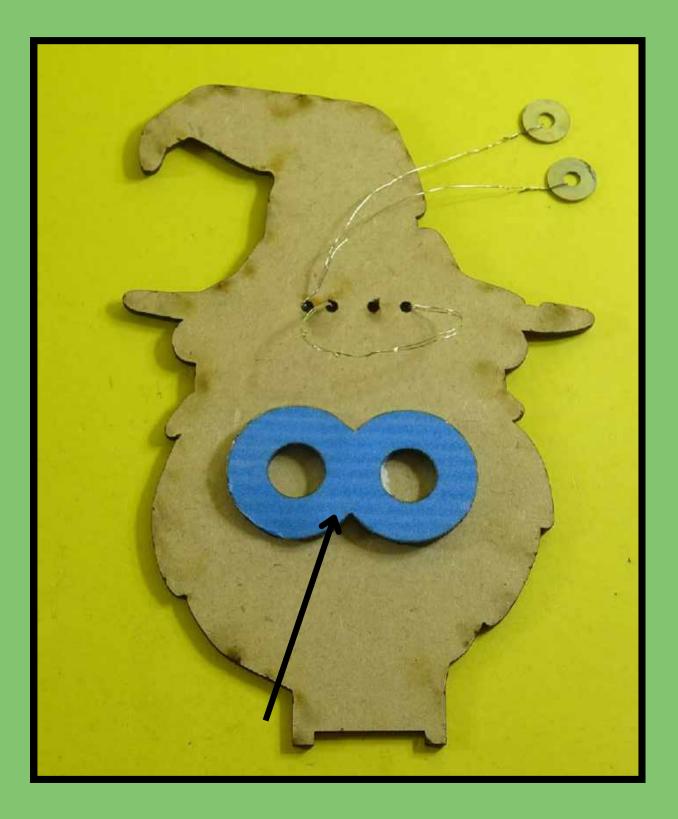

Remove the double-sided sticker as demonstrated and stick it to the backside of the MDF, as shown

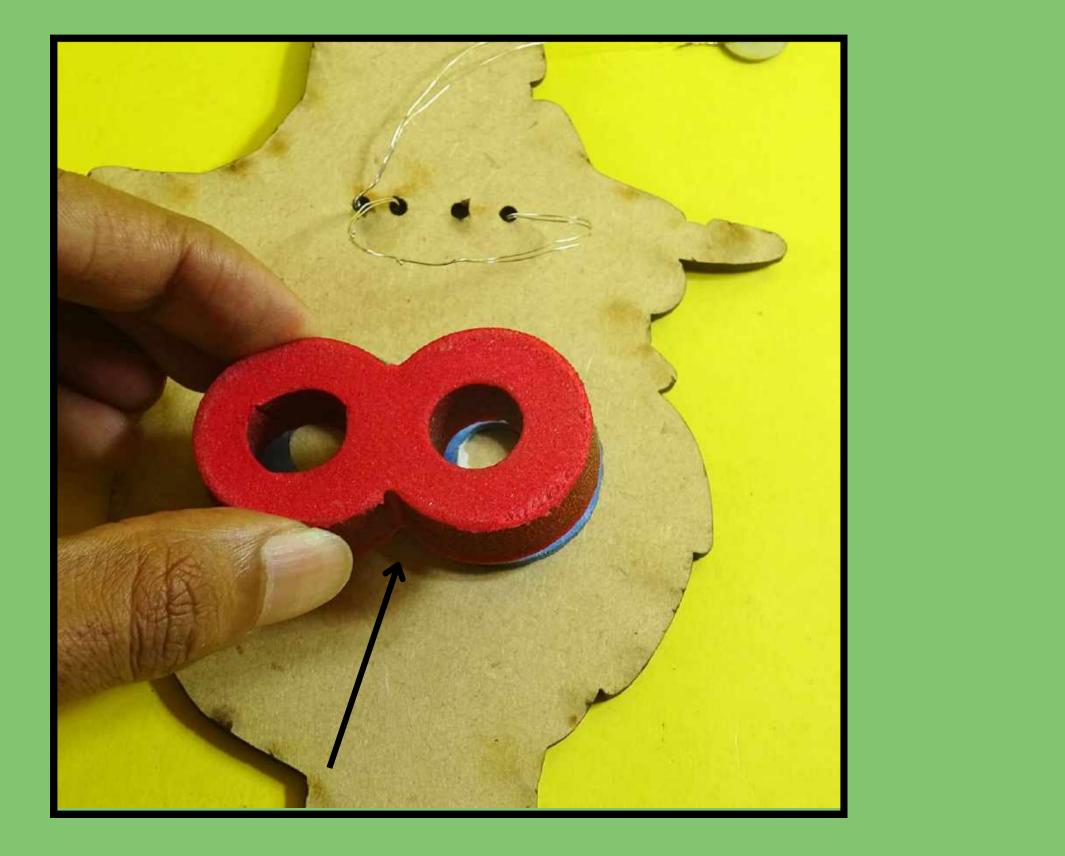

Remove the double-sided sticker other side also as demonstrated

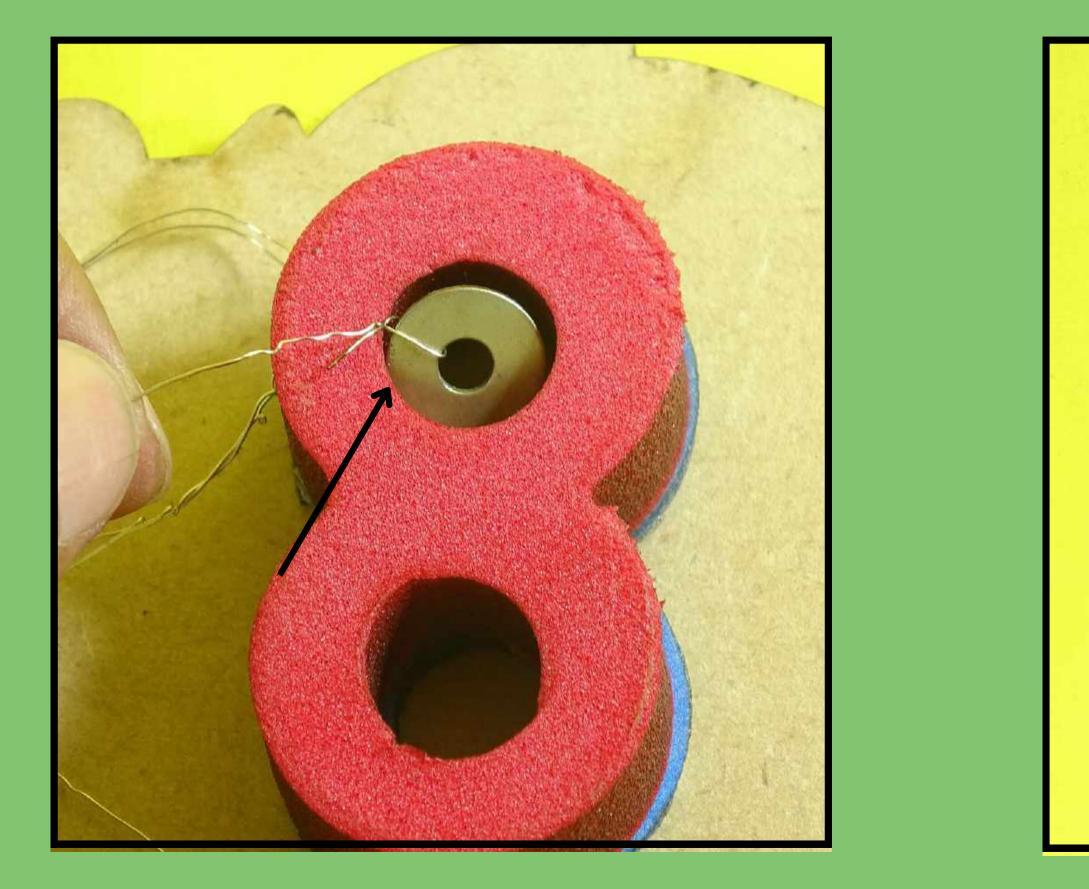

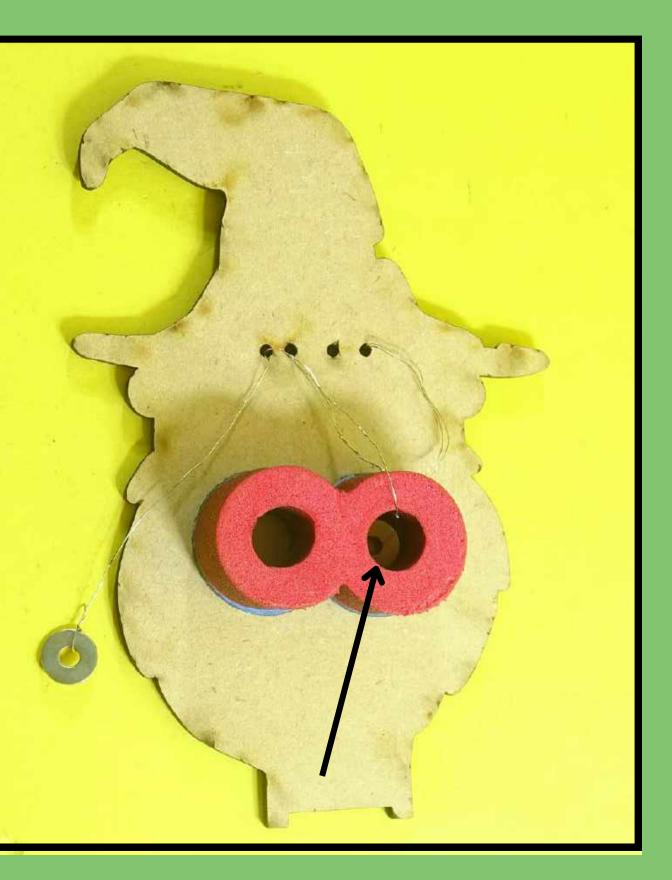

Stick the foam cell holder onto the double-sided sticker as shown

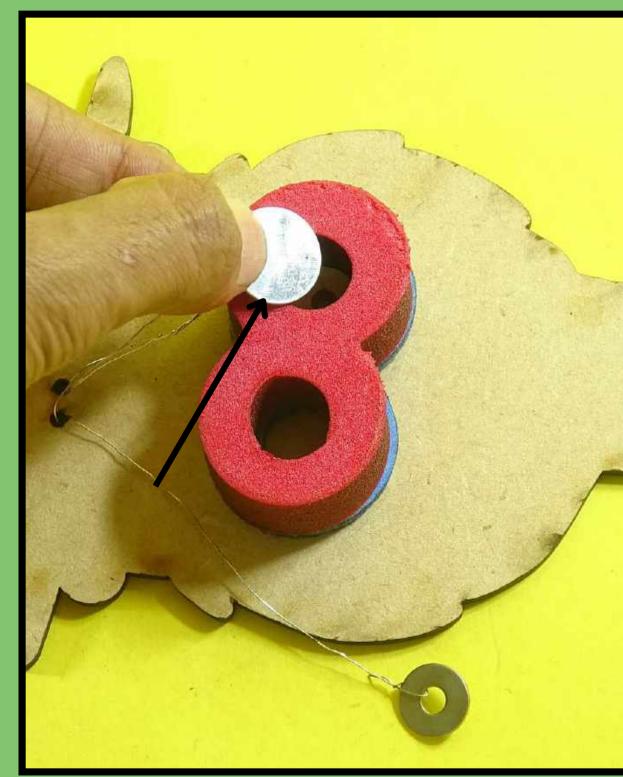

Put one washer inside the foam, just like it's shown

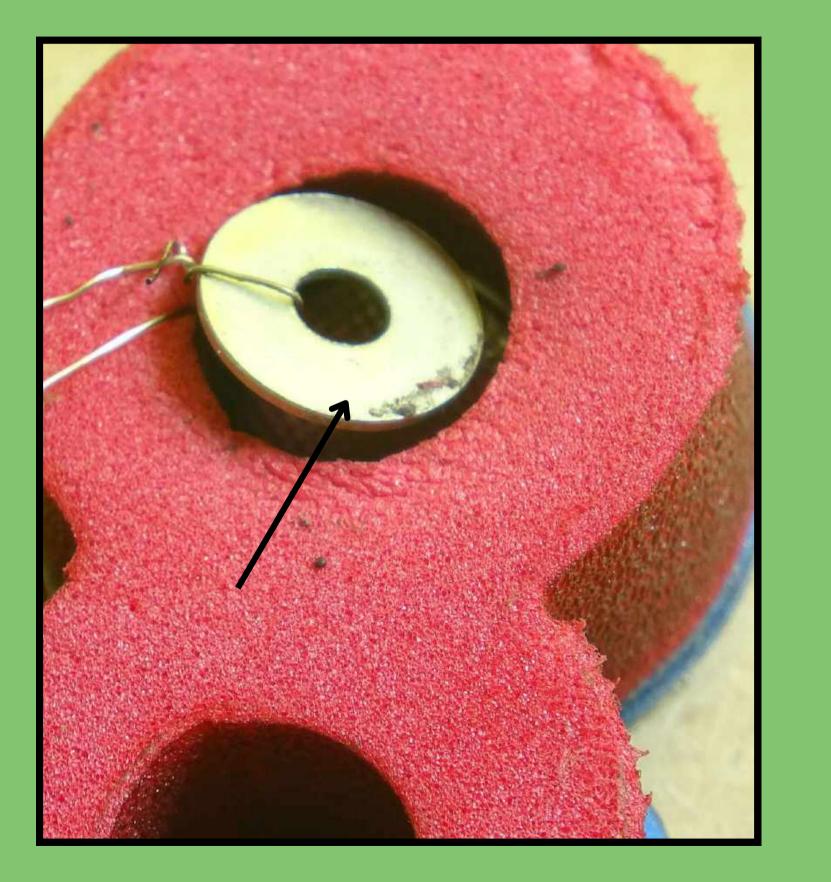

Add cell to foam cell holder just like it's shown

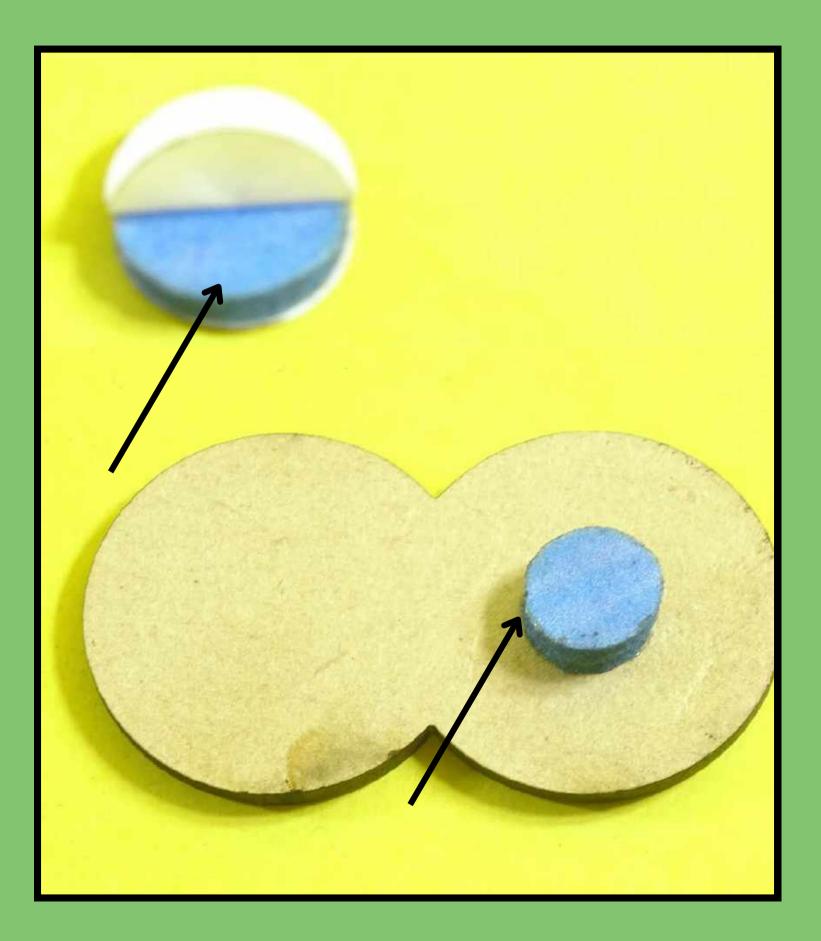

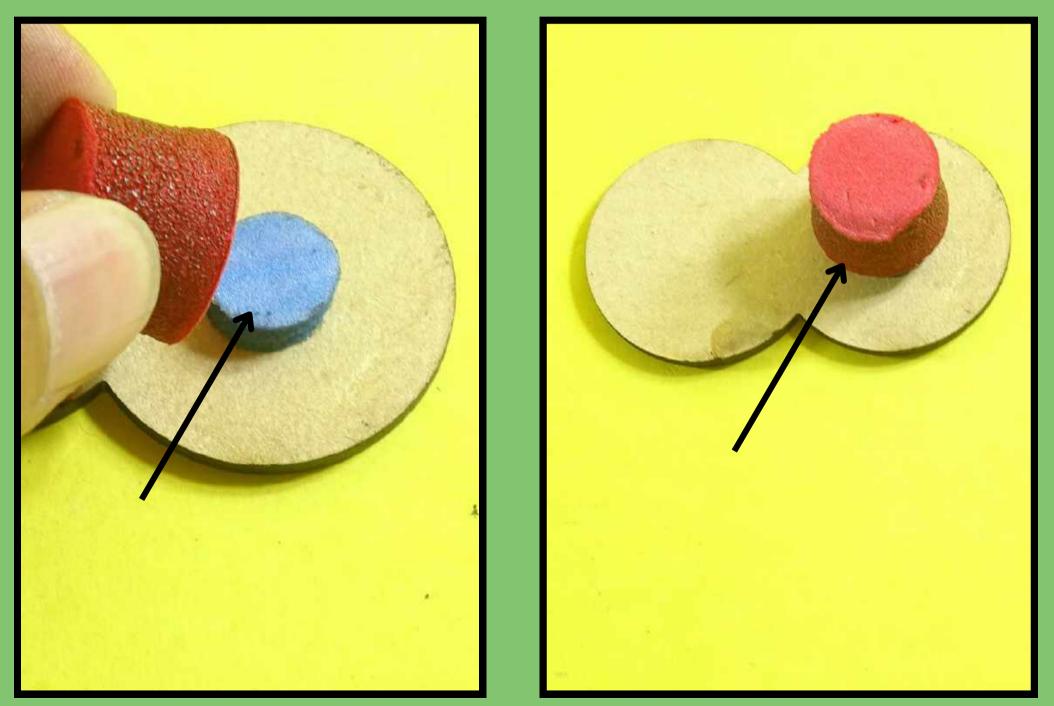

Put another washer inside the foam, just like it's shown

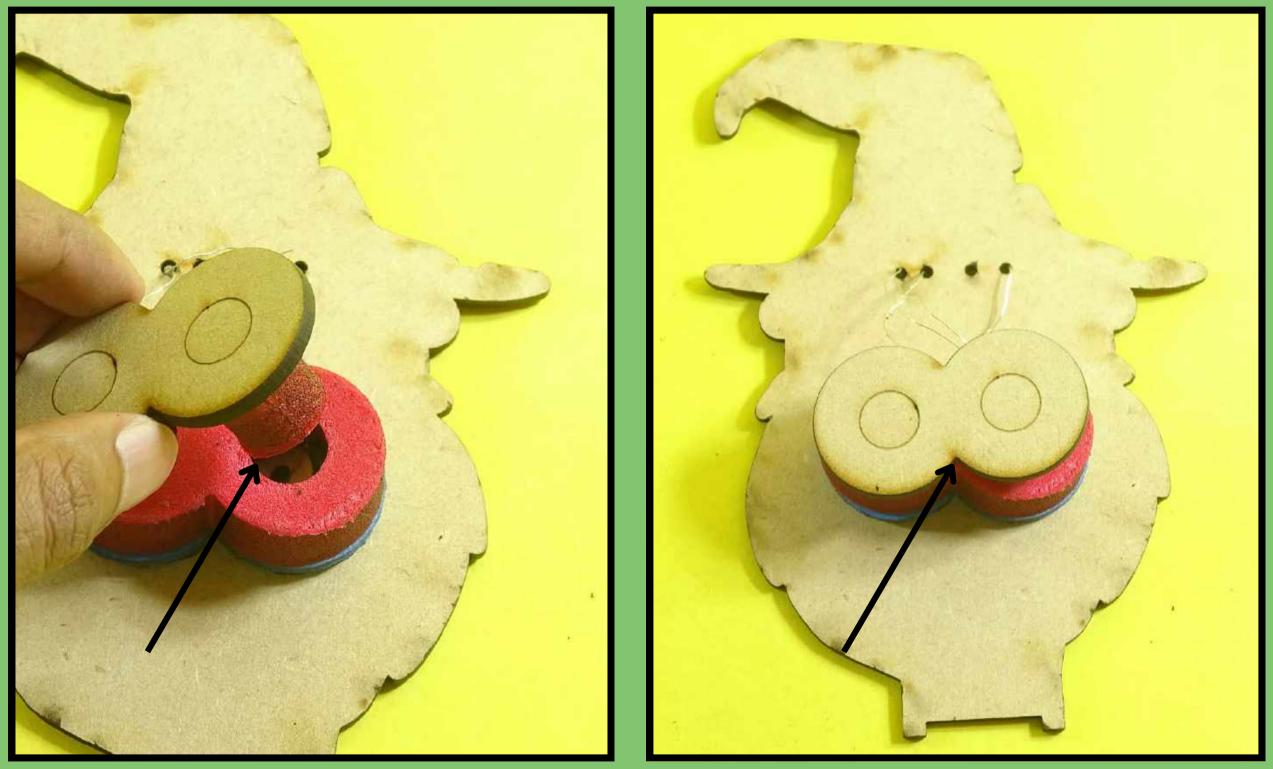

foam switch to it.

Take off the small double-sided sticker, stick it to the MDF, and then attach the

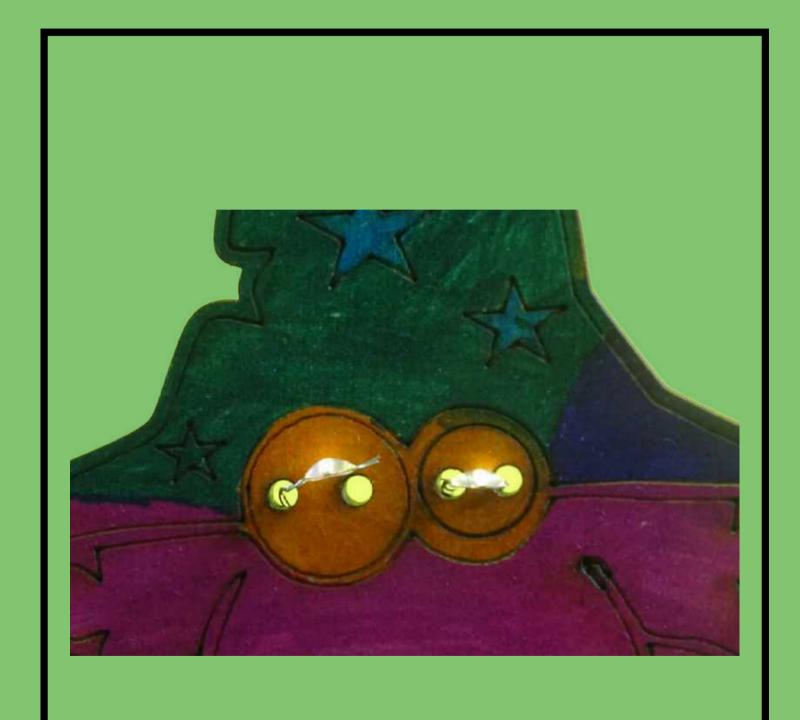

Connect the foam switch to the cell holder as demonstrated

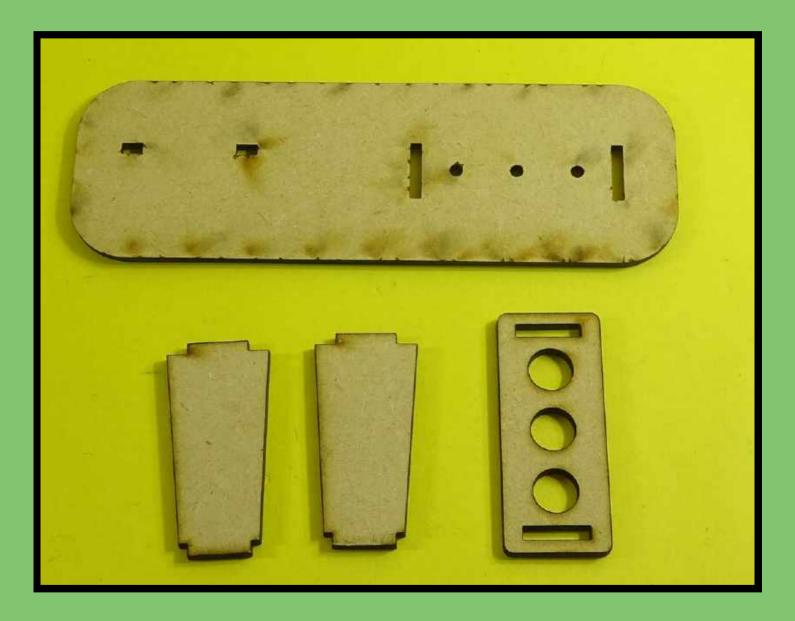

LED start glowing after connectiong switch to it

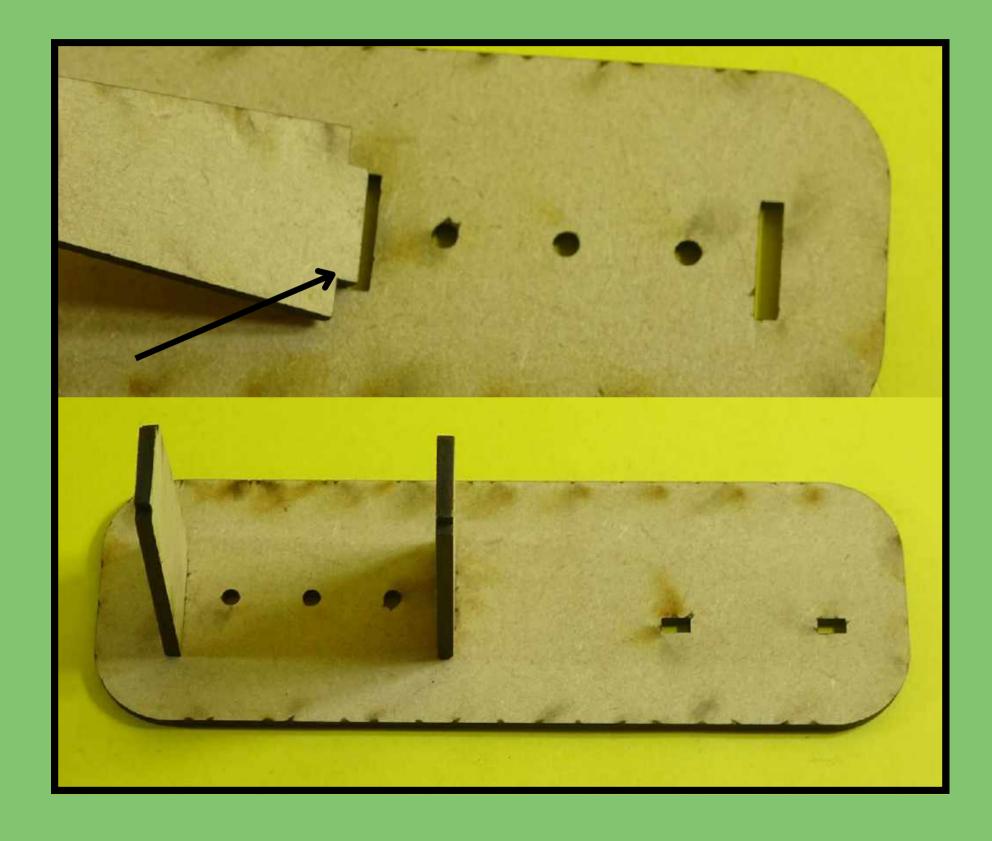

Take the below shown mdf segments

Attach the side part of the MDF to the base as shown

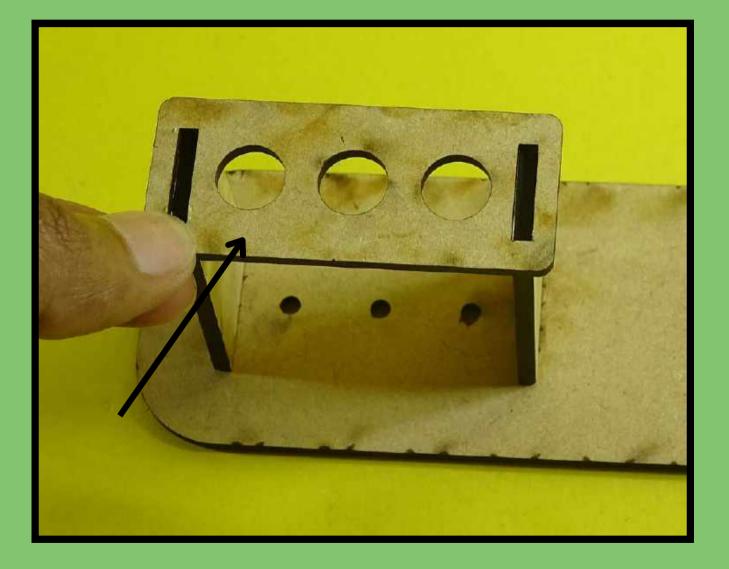

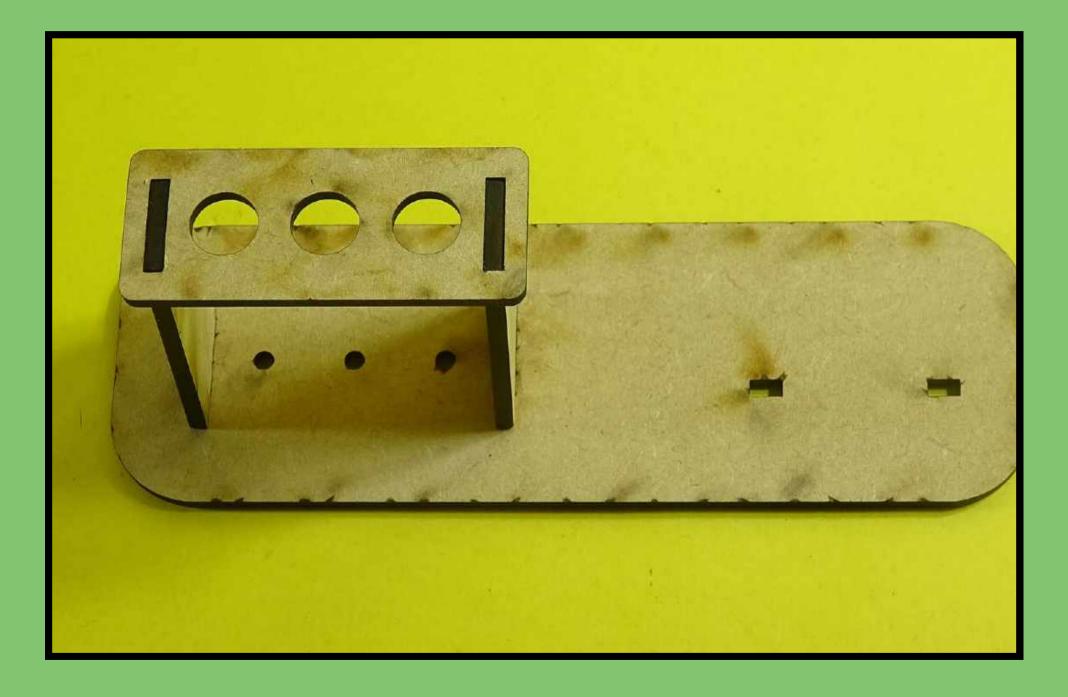

If the MDF parts are loose, use cello tape. If the MDF parts are tight, use sandpaper.

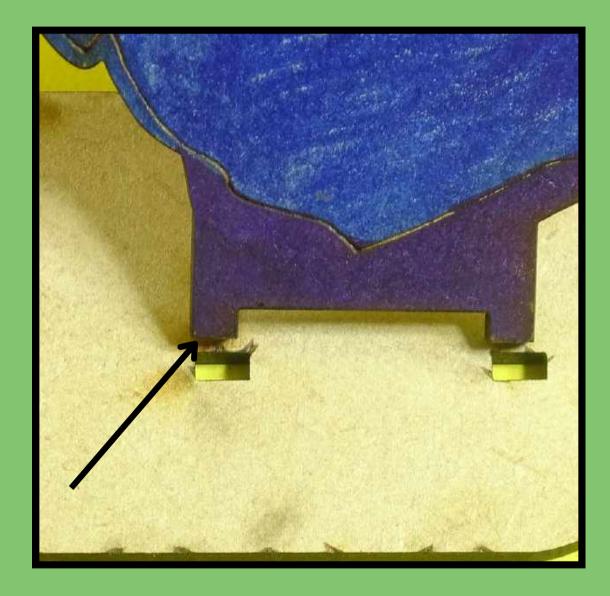

Attach the top part of the side mdf as shown

Insert the MDF with the connected LED into the base stand MDF

YOUR LED WIZARD IS READY

You can put pens in the MDF stand, just like it's shown

HOW IT WORKS?

The LED Wizard Experiment is like magic! We connect tiny light bulbs called LEDs to a battery. When we close the circuit, the LEDs light up, creating a beautiful display of colors. It's like making our own light show!
